1. Introduction :

Children with disabilities in Pakistan often face difficulties accessing examination assistance, learning support, communication services, and therapy. These services are usually arranged through separate schools, NGOs, therapists, or personal contacts, making support difficult to manage.

HAMQADAM is a web-based platform that brings these services into one place. It provides **writer booking and emergency replacement, Individualized Learning Plans (ILP) with progress tracking, and online therapy consultations** with free, affordable, and premium service options. The platform aims to make support more accessible, organized, and convenient for special-needs students and their families.

2. Objectives:

- Develop a centralized **Exam Writer/Scribe Booking and Scheduling System** for visually impaired students.
- Implement an **Emergency Writer Replacement System** to provide quick alternatives when a confirmed writer becomes unavailable.
- Develop an **Individualized Learning Plan (ILP)** with structured learning goals and progress tracking.
- Provide an **Online Therapy Consultation System** with free/NGO, affordable, and premium therapist options.

3. Problem Description:

What:

Families of children with **visual impairment, hearing impairment, speech impairment, and Autism Spectrum Disorder (ASD)** often have to manage educational and professional support through different people and separate channels. A visually impaired student may need an exam writer, another child may need a structured learning plan, while some families may require access to therapists. Since these services are not organized in one place, parents can find it difficult to locate suitable, verified, and available support when they need it.

Why:

The problem becomes more serious when support is time-sensitive. For example, if an exam writer cancels before an examination, the family may have no quick way to find a suitable replacement. Therapy can also be difficult to access because providers may differ in cost, availability, and specialization. Some families may only be able to use free or NGO-supported services, while others

may prefer paid professionals. Managing learning progress separately also makes it harder for parents to keep track of a child's educational needs in a structured way.

How:

HAMQADAM addresses these issues through a centralized web platform. It provides verified writer registration, rule-based writer matching, booking and payment management, and emergency writer replacement. It also includes an **Individualized Learning Plan (ILP)** for disability-specific learning goals and progress tracking. For therapy support, parents can search and book verified providers from **free/NGO, affordable paid, or premium categories** and attend scheduled sessions through video calling. This allows families to manage different support needs through one organized system.

4. Existing System & Competitor Gap Analysis

At present, families of children with disabilities in Pakistan usually depend on a combination of **personal contacts, social-media groups, NGOs, special education centres, therapists, and disability-specific tools**. These avenues provide useful support, but they generally operate separately and do not provide one system for managing exam writers, emergency replacements, learning plans, and therapy appointments. HAMQADAM is proposed to address this fragmentation by bringing these services into a single web-based platform.

Area / Feature	Existing Approach	Current Gap	HAMQADAM Proposed Solution
Finding Exam Writers / Scribes	Students and parents commonly depend on personal contacts, educational institutions, NGOs, Facebook groups, or WhatsApp communities.	Finding a suitable writer is mostly manual and there is no structured method for checking availability, qualification, subject suitability, or examination requirements.	A centralized Writer Booking and Scheduling System where verified writers can register their qualifications, experience, subjects, grade levels, board information, availability, and fee.
Writer Matching	Parents usually communicate with available writers individually and decide suitability themselves.	The process depends heavily on manual checking and personal judgment, which can make it difficult to compare several writers quickly.	A rule-based, non-AI matching mechanism filters writers according to subject, grade, board requirements, exam date/time, availability, qualifications, and experience.
Writer Verification	Verification may depend on referrals, personal trust, institutions, or NGO records.	Parents may have limited information about the writer's background before confirming the arrangement.	Writers submit profile information and supporting documents, which are reviewed by the administrator before approval on the platform.

Area / Feature	Existing Approach	Current Gap	HAMQADAM Proposed Solution
Writer Payment Management	Payments are generally arranged directly between the parent and writer without a centralized record.	There may be no organized record of agreed fee, payment status, or adjustments if the booking changes.	HAMQADAM maintains writer fees, transaction details, and payment statuses linked with each booking.
Writer Cancellation	If a writer becomes unavailable, parents normally restart the search through calls, contacts, or social-media requests.	A last-minute cancellation can leave a visually impaired student without examination assistance.	An Emergency Writer Replacement System retrieves the original exam requirements and searches the verified writer pool for suitable replacements.
Replacement Payment Handling	Payment issues after cancellation are usually resolved manually between the people involved.	Changing writers may create confusion if the replacement charges a different amount.	The system records the replacement fee and can manage the status of additional payment, credit, or refund adjustment when required.
Individualized Learning Support	Learning plans are generally managed by individual schools, teachers, therapists, or special education centres.	Educational support may remain separate from the other services being managed by the family.	An Individualized Learning Plan (ILP) organizes learning goals, activities, and progress for children with visual, hearing, speech, and autism-related needs.
Progress Tracking	Parents may depend on verbal updates, notebooks, reports, or separate institutional records.	Progress information can become scattered and difficult to follow over time.	HAMQADAM stores learning goals and allows progress to be updated using structured statuses such as Not Started, In Progress, and Completed .
Finding Therapists	Families commonly depend on referrals, clinics, NGOs, social media, or individual therapist contacts.	Information regarding specialization, charges, and availability may be spread across different sources.	A centralized list of verified therapists/service providers showing relevant information such as specialization, fee

Area / Feature	Existing Approach	Current Gap	HAMQADAM Proposed Solution
Affordability of Therapy	Families may choose between limited NGO services or private practitioners with different fee structures.	Families with limited budgets may struggle to identify affordable professional support.	category, experience, and availability. Therapists are organized into NGO/Free, Affordable Paid, and Premium categories, allowing families to choose according to their financial capacity.
Therapy Appointment Scheduling	Appointments are often arranged through calls, messages, or clinic-specific systems.	Parents may have to contact multiple providers individually to check availability.	Parents can view available slots, send appointment requests, and manage confirmed therapy sessions through HAMQADAM.
Online Therapy Sessions	Some therapists independently use external calling applications for online consultations.	Scheduling and the actual consultation may be managed through separate systems.	HAMQADAM connects scheduled therapy appointments with an integrated video consultation workflow for parent–therapist communication.
Multi-Disability Support	Many services and tools focus on one disability or one specific type of assistance.	Families may need to use different services for visual, hearing, speech, and autism-related support.	HAMQADAM brings support for the four identified disability groups into one web-based environment while keeping the services relevant to each category.
Service Management	Writers, therapists, NGOs, and families often operate through separate communication channels.	There is no common workflow connecting service requests, provider availability, booking, and administration.	Role-based dashboards are provided for parents, writers, therapists/service providers, and administrators.
Accessibility and Ease of Use	Existing information may be distributed across social media, websites, phone contacts, and physical centres.	Managing multiple channels can be difficult, particularly for parents with limited digital experience.	A simple, responsive, low-complexity web interface brings the main support functions into one system.

Area / Feature	Existing Approach	Current Gap	HAMQADAM Proposed Solution
----------------	-------------------	-------------	----------------------------

5. Target Users & Stakeholders

HAMQADAM is designed for the people who are directly involved in arranging, providing, and managing support for children with special needs. The platform mainly focuses on families of children with **visual impairment, hearing impairment, speech impairment, and Autism Spectrum Disorder (ASD)**, while also providing a structured system for writers, therapists, NGOs, and administrators.

User / Stakeholder	Role in HAMQADAM
Parents / Caregivers	The main users of the platform. They can create a child profile, enter exam requirements, search and book writers, manage payments, access the child's ILP, track progress, and book online therapy sessions.
Children with Special Needs	The primary beneficiaries of the system. HAMQADAM is intended to support children with visual, hearing, speech, and autism-related needs through educational and professional support services.
Exam Writers / Scribes	Writers can register on the platform, provide their qualification, experience, subject specialization, board, availability, and fee. After admin verification, they can receive and respond to booking requests.
Therapists / Service Providers	Verified therapists can create professional profiles, specify their specialization, experience, consultation charges, and available time slots. They can accept therapy appointments and provide online sessions through video calling.
NGO-Based Service Providers	NGOs or welfare-based professionals can provide free or subsidized therapy and support services for families who may not be able to afford private consultation.
System Administrator	The administrator manages users, verifies writers and therapists, reviews uploaded documents, manages bookings and service records, monitors transactions, and maintains the overall platform.
Special Education Organizations / NGOs	These organizations can act as supporting stakeholders by providing verified professionals, educational resources, or free and subsidized services to families.
Educational Institutions	Schools, colleges, and examination-related institutions are indirect stakeholders because visually impaired students may require writer support during examinations. HAMQADAM can help families arrange suitable writers according to examination requirements.

The main focus of HAMQADAM is therefore not only the child, but the **complete support network around the child**. By bringing parents, writers, therapists, NGOs, and administrators into one system, the platform aims to reduce the dependence on separate and informal arrangements.

6. Methodology

HAMQADAM will be developed using an **incremental development approach**, where the system will be divided into manageable phases. Each phase will focus on understanding the problem, designing the required workflow, developing the features, and testing them before moving to the next stage. This approach will help keep the project realistic within the available FYP timeline and will allow the team to improve the system gradually based on testing and feedback.

Phase 1: Requirement Analysis and Problem Understanding

The first phase will focus on understanding the difficulties faced by parents, visually impaired students, writers, therapists, and other service providers. Existing practices such as finding writers through personal contacts, arranging therapy separately, and managing learning support through different channels will be studied. Based on this analysis, the functional and non-functional requirements of HAMQADAM will be finalized.

Phase 2: System Design and UI/UX Planning

The main user roles, including **Parent, Writer, Therapist/Service Provider, and Administrator**, will be defined. User flows, wireframes, dashboards, forms, and booking processes will be designed using **Figma**. The database structure will also be planned for storing user profiles, child information, writer details, therapist information, bookings, payments, ILPs, and appointments.

Phase 3: FYP-I – Writer Booking and Scheduling System

The first development phase will focus on the core writer-management module. Writers will register with information such as qualifications, experience, subject specialization, board, grade level, availability, fee, and supporting documents. The administrator will verify writers before they become available for booking.

Parents will enter the student's exam details, after which a **rule-based matching system** will filter eligible writers. The system will use predefined conditions such as:

Subject → Grade Level → Examination Board → Date/Time → Availability → Qualification → Experience

Eligible writers will then be displayed to the parent for selection. The parent can send a booking request, while the writer can accept or reject it. The booking module will also maintain writer fees and payment-related records.

Phase 4: FYP-II – Emergency Writer Replacement

If a confirmed writer cancels or becomes unavailable, HAMQADAM will retrieve the original exam requirements instead of requiring the parent to enter the information again. The same rule-based matching process will search for other verified and available writers while excluding the cancelled writer.

The parent will then be shown suitable replacements. Any difference in the writer's fee will be recorded through the payment-management module as an additional payment, adjustment, credit, or refund status where applicable.

Phase 5: Individualized Learning Plan (ILP)

The ILP module will provide structured educational support for children with **visual impairment, hearing impairment, speech impairment, and Autism Spectrum Disorder**. Based on the selected disability category, grade level, and learning requirements, the system will provide predefined learning goals and activities.

Parents will be able to monitor the child's progress using simple progress states such as:

Not Started → In Progress → Completed

The ILP will be used as an educational support and progress-management feature and will not be used for medical diagnosis.

Phase 6: Online Therapy Consultation

Verified therapists and service providers will be categorized according to their service model:

- **NGO / Free Providers**
- **Affordable Paid Therapists**
- **Premium Therapists**

Parents will be able to view provider profiles, specialization, consultation charges, experience, and available time slots before booking a session. The system will manage appointment scheduling, while a **web-based video communication mechanism** will be used for conducting online therapy sessions.

Phase 7: Backend and Database Development

The system will be developed using **PHP with Laravel** following the MVC architecture. **MySQL** will be used to maintain structured records, including user information, bookings, writer availability, transactions, therapist appointments, and ILP progress. **XAMPP** will be used as the local development environment during the implementation phase.

Phase 8: Testing and Evaluation

Each module will be tested individually before complete system integration. Testing will include form validation, role-based access, writer matching, booking acceptance/rejection, emergency replacement, payment status handling, ILP progress updates, and therapy appointment scheduling. Integration testing will then be carried out to ensure that the different modules work together correctly.

7. Project Scope

The scope of HAMQADAM is centered on providing organized educational and support services for children with **visual impairment, hearing impairment, speech impairment, and Autism Spectrum Disorder (ASD)**. The project is intended to connect families with relevant assistance while keeping the system manageable within the FYP period.

7.1 In Scope

- Providing an organized system for arranging **exam writers/scribes** for visually impaired students.
- Matching students with suitable writers according to their examination requirements and the writer's eligibility and availability.
- Providing an **emergency replacement facility** when a confirmed writer becomes unavailable before an examination.
- Maintaining booking-related payment records, including writer charges, platform fees, and payment status.
- Providing an **Individualized Learning Plan (ILP)** for the four selected disability categories to organize learning goals, activities, and student progress.
- Allowing parents or caregivers to monitor the child's learning progress through the platform.
- Connecting families with **verified therapists and service providers** for online consultation.
- Organizing therapy providers into **NGO/Free, Affordable Paid, and Premium** categories so families with different financial situations have suitable options.
- Providing separate access according to the responsibilities of parents, writers, therapists/service providers, and administrators.

7.2 Out of Scope

- Medical or psychological diagnosis of a child's disability will not be performed by HAMQADAM.
- The platform will not replace therapists, doctors, special educators, or other qualified professionals.
- The ILP will not be treated as a clinical treatment plan or a substitute for professionally prescribed therapy.
- Direct integration with examination boards, hospitals, schools, or government information systems will not be included in the current project.
- Nationwide coverage of writers and therapists, as well as formal partnerships with institutions, will not be guaranteed during the FYP stage.
- Full banking operations, automatic financial settlements, and direct payout processing will remain outside the current scope.
- Emergency healthcare and crisis-response services will not be provided through the platform.
- A separate native mobile application will not be considered in the current development phase.

7.3 Assumptions

- Parents or caregivers will provide accurate information regarding the child and examination requirements.
- Writers and therapists will provide genuine details and supporting information during registration.
- Service providers will keep their availability and relevant profile information updated.
- Availability of writers and therapists will depend on the number of verified providers registered on HAMQADAM.
- Users will have basic internet access, particularly when using online therapy services.
- The initial system will be developed and evaluated within the FYP environment, while broader institutional collaboration and expansion may be considered in the future.

8. Feasibility Study

HAMQADAM is feasible within the proposed FYP timeline because the project is divided into clearly defined modules and most of the required development can be carried out using technologies already familiar to the team. The first phase will focus on the writer booking and scheduling system, while the remaining modules such as emergency replacement, ILP, and online therapy consultation will be completed in the next phase. Keeping the project modular will make development, testing, and refinement easier to manage.

8.1 Risks Involved

Risk	Possible Impact	How It Will Be Managed
Limited Development Time	Completing all modules within the FYP period may become difficult if too many features are added.	The project scope will remain fixed and development will be divided into FYP-I and FYP-II milestones.
Scope Expansion	Additional ideas may increase complexity and delay the core work.	Only the approved features will be developed during the current FYP. Extra features will be kept for future development.
Writer Availability	A suitable writer may not always be available for a particular exam date or subject.	The system will maintain writer availability and use rule-based filtering. The emergency replacement feature will provide an alternative when possible.
Therapist Availability	Free or affordable therapists may have limited appointment slots.	Providers will be grouped by category and users will be able to view available options and timings before booking.

Risk	Possible Impact	How It Will Be Managed
Provider Verification	Incorrect or incomplete information from writers or therapists may reduce trust in the system.	Service providers will submit relevant details and supporting documents for administrator review before approval.
Video Consultation Issues	Weak internet connectivity may affect the quality of an online therapy session.	Video consultation will depend on internet availability, and failed or interrupted sessions can be rescheduled.
Payment Disputes	Writer replacement or cancellation may create confusion about fees or refunds.	Payment records will remain linked with the booking and any fee difference, credit, or refund status will be recorded separately.
Sensitive User Information	The platform will contain information related to children and their support needs.	Only necessary information will be collected, and access will be restricted according to user roles.
Testing with Real Users	Access to parents, writers, or therapists for testing may be limited.	The system can initially be tested with sample data and controlled user scenarios, followed by feedback where participants are available.

8.2 Resource Requirements

The project does not require expensive hardware or specialized infrastructure for its initial development. The main resources required are:

- **Development Computers/Laptops:** Existing personal computers will be sufficient for development, testing, and documentation.
- **Development Environment:** XAMPP will be used to run the local server and database during development.
- **Backend Development:** PHP and Laravel will be used for server-side development and system logic.
- **Database:** MySQL will be used for managing users, bookings, writer information, therapist profiles, payments, and ILP-related records.
- **Frontend Development:** HTML, CSS, and JavaScript will be used to build the web interface.
- **UI/UX Design:** Figma will be used for wireframes, interface planning, and prototype design.
- **Code Editor and Version Management:** Visual Studio Code will be used for development, while Git may be used to maintain code versions and team collaboration.
- **Internet Connection:** Required for research, testing online services, and video consultation features.
- **Video Communication Service:** A suitable web-based video calling service or API will be required for the online therapy module.

- **Testing Data:** Sample user profiles, exam details, writer records, therapist information, and ILP data will be required for functional testing.

9. Solution Application Areas

HAMQADAM can be applied in areas where children with disabilities and their families require organized educational, examination, and professional support. The platform is mainly intended for use within the following domains:

- **Special Education Support**

The system can support families of children with visual impairment, hearing impairment, speech impairment, and Autism Spectrum Disorder by providing structured access to learning assistance and individualized learning plans.

- **Examination Assistance for Visually Impaired Students**

HAMQADAM can be used to arrange suitable exam writers/scribes for visually impaired students. It can also support urgent replacement when a confirmed writer becomes unavailable before an examination.

- **Therapy and Professional Consultation**

Families can use the platform to find and schedule verified therapists according to specialization, availability, and affordability. The three service categories NGO/Free, Affordable Paid, and Premium allow families with different financial conditions to access suitable options.

- **NGOs and Welfare Organizations**

Organizations working with children with disabilities can use HAMQADAM as a channel to make free or subsidized services more visible and accessible to families who may otherwise have difficulty finding them.

- **Parent and Caregiver Support**

Parents can manage different support needs from one place instead of depending on separate contacts for writers, therapists, and learning assistance. This can make the overall process easier to organize and follow.

- **Learning and Progress Management**

The ILP component can be used to organize learning goals and activities according to the child's disability category and to maintain a simple record of educational progress over time.

- **Service Provider Coordination**

Writers and therapists can maintain their profiles, availability, service details, and booking information through a structured platform, while administrators can monitor and verify their participation.

Overall, the main application of HAMQADAM lies in **special education, disability support, examination assistance, therapy access, and family-service coordination**. It is intended to reduce the fragmentation that currently exists between families and the different forms of support they may need

10. Tools And Technologies

The tools and technologies for HAMQADAM have been selected with the aim of keeping the project practical, manageable, and suitable for web-based development within the available FYP timeline.

Tool / Technology	Purpose in HAMQADAM
HTML	Used to create the basic structure of the web pages, forms, dashboards, booking screens, and other user interfaces.
CSS	Used for styling, responsive layouts, accessibility improvements, and maintaining a clean and consistent interface across the system.
JavaScript	Used for client-side interactions, form validation, dynamic page behavior, and improving overall user experience.
PHP	Used for server-side processing and handling the main application logic.
Laravel Framework	Used as the main backend framework. Its MVC structure will help organize authentication, user roles, bookings, writer matching, payments, ILP records, and therapy appointments in a structured way.
MySQL	Used as the relational database for storing parent profiles, child information, writer and therapist records, bookings, payment details, ILP progress, and appointment information.
XAMPP	Used as the local development environment for running Apache, PHP, and MySQL during development and testing.
Figma	Used for UI/UX design, wireframes, dashboard planning, and preparing prototypes before development.
Visual Studio Code	Used as the main code editor for frontend and backend development.
API	Used to support online therapy sessions between parents and verified therapists. The final service will be selected according to development feasibility and integration requirements.

• Development Approach

HAMQADAM will follow the **Model-View-Controller (MVC)** structure provided by Laravel. This will help separate the user interface, application logic, and database operations, making the system easier to manage and maintain.

The selected stack is suitable for the planned modules because it supports:

- Role-based user management
- Writer booking and scheduling
- Rule-based matching
- Payment record management
- Emergency writer replacement
- ILP progress tracking
- Therapist appointment scheduling
- Online video consultation

11. Expertise of the Team Members

❖ Iman Shahzad

- Has a Computer Science background and working knowledge of web development technologies including **HTML, CSS, UI/UX design, JavaScript, PHP, MySQL, and Laravel**.
- Has studied relevant computing subjects covering programming, databases, software development, and system design.
- Is capable of contributing to documentation, development, database design, booking workflows, testing, and project documentation.

❖ Fatima Almani

- Has a Computer Science background with knowledge of software development, frontend design, and database-related concepts.
- Has completed relevant coursework that supports the development of a web-based system.
- Will contribute to **UI/UX design, frontend development, related modules, testing, integration**.

❖ Overall Team Capability

- Both team members already have the basic technical knowledge required to develop the main modules of HAMQADAM.
- Some areas, such as **video-call integration, accessibility-focused design, and more complex workflow handling**, may require additional learning during development.
- The project is of **equal interest to both members**, and both will participate throughout requirement analysis, design, development, testing, and documentation.
- The selected project is also suitable for the team because it combines their existing computing knowledge with practical problem-solving in a socially relevant domain.

12. Milestones

The development of HAMQADAM will be divided into two major stages, **FYP-I and FYP-II**.

FYP-I will establish the foundation of the platform and complete the exam writer booking workflow, while FYP-II will extend the system with emergency replacement, individualized learning support, and online therapy consultation.

Major Milestones

- Requirement gathering and finalization of the system workflow.
- Designing user journeys, wireframes, and dashboards for parents, writers, therapists, and administrators.
- Setting up the development environment, database structure, and role-based authentication.
- Developing parent, writer, and admin profiles with the required information and verification process.
- Implementing the writer search, matching, booking, scheduling, and payment-record workflow.
- Testing and completing the FYP-I writer booking module.
- Extending the booking system with emergency writer replacement in FYP-II.
- Developing the Individualized Learning Plan and progress-tracking module.
- Adding therapist profiles, affordability categories, appointment scheduling, and online video consultation.
- Integrating all modules and carrying out system testing, refinement, and final documentation.

12.1 FYP-I Features

FYP-I will focus mainly on the Exam Writer/Scribe Booking and Scheduling System.

- **User Registration and Login**

Parents, writers, and administrators will have separate access according to their roles.

- **Parent and Child Profile Management**

Parents will be able to maintain child-related information such as disability type, education level, and special requirements.

- **Writer Registration and Profile Management**

Writers will provide details including qualification, subject specialization, grade level, board, experience, availability, and service fee.

- **Writer Document Verification**

Writers will upload supporting documents, which will be reviewed by the administrator before approval.

- **Exam Requirement Entry**

Parents will enter relevant exam information such as subject, grade, board, date, time, and other support requirements.

- **Rule-Based Writer Matching**

The system will shortlist suitable verified writers using predefined criteria such as subject, grade, board, availability, qualification, and experience.

- **Writer Recommendation and Selection**

Suitable writers will be displayed to the parent, who can select one according to the provided information.

- z• **Booking Request Management**

The selected writer will receive the request and can either accept or reject it.

- **Scheduling and Booking Confirmation**

An accepted request will create a confirmed writer booking for the specified examination.

- **Writer Payment Record Management**

The booking will maintain the writer fee, platform/service charge, transaction reference, and payment status.

- **Admin Dashboard**

The administrator will manage users, verify writers, review bookings, and monitor relevant records.

- **UI/UX and Form Validation**

The main dashboards and forms will be designed with a simple, responsive, and easy-to-follow interface.

12.2 FYP-II Features

FYP-II will expand HAMQADAM beyond the basic booking system and introduce additional support services.

- **Emergency Writer Replacement System**

If a confirmed writer cancels or becomes unavailable, the system will use the original exam requirements to search for suitable replacement writers.

- **Replacement Matching and Rebooking**

Available verified writers will be filtered again, and the parent will be able to select an alternative without creating the entire exam request again.

- **Individualized Learning Plan (ILP)**

Learning support will be provided for children with:

- Visual impairment
- Hearing impairment
- Speech impairment

- Autism Spectrum Disorder

The ILP will organize learning goals, activities, and progress according to the child's selected disability category and educational needs.

- **Therapist / Service Provider Registration**

Therapists will create profiles containing specialization, experience, availability, consultation fee, and supporting information for verification.

- **Tiered Therapy Access**

Therapists will be grouped into:

- **NGO / Free Service Providers**
- **Affordable Paid Therapists**
- **Premium Therapists**

This will allow families to choose services according to their needs and financial capacity.

- **Therapy Appointment Scheduling**

Parents will be able to select therapists, view available slots, and schedule online sessions.

- **Online Video Consultation**

A video calling facility will allow parents and verified therapists to conduct scheduled online therapy sessions.

- **Final Integration and Testing**

All FYP-I and FYP-II modules will be combined and tested as one complete HAMQADAM platform before final submission.

13. Project Structure

14. Work Breakdown Structure

14.1 FYP-I Work Breakdown Structure

1. Project Planning and Analysis

- Finalize project requirements
- Confirm user roles and system workflow
- Define FYP-I boundaries
- Prepare proposal and defense material

2. UI/UX and System Design

- Create wireframes in Figma
- Design Parent, Writer, and Admin dashboards
- Design registration, login, profile, booking, and payment screens
- Finalize navigation flow and form structure

3. Development Environment Setup

- Configure XAMPP
- Set up Laravel project
- Create MySQL database
- Prepare initial database structure

4. User Management

- Parent registration and login
- Writer registration and login
- Admin login
- Role-based access control
- Profile creation and editing
- Form validation

5. Parent and Child Module

- Parent profile
- Child profile
- Disability-related information
- Education level

- Exam requirements
- Special support requirements

6. Writer Management

- Writer profile
- Qualification details
- Subject specialization
- Grade level
- Examination board
- Experience
- Availability
- Writer fee
- Document upload

7. Admin Verification

- View registered writers
- Review submitted documents
- Approve or reject writer profiles
- Manage users and records

8. Writer Matching

- Read exam requirements
- Filter verified writers
- Match subject
- Match grade level
- Match examination board
- Check date and time availability
- Consider qualification and experience
- Display suitable writers to the parent

9. Booking and Scheduling

- Parent selects writer
- Booking request is sent
- Writer accepts or rejects request

- Confirm accepted booking
- Store scheduled exam details
- Maintain booking status

10. Payment Record Management

- Record writer fee
- Add platform/service fee
- Maintain transaction reference
- Update payment status
- Link payment record with booking

11. Testing and Refinement

- Test registration and login
- Test dashboards
- Test validations
- Test writer verification
- Test matching rules
- Test complete booking flow
- Fix errors and improve usability

12. Documentation and Final Preparation

- Update project documentation
- Prepare FYP-I demonstration
- Complete testing evidence
- Prepare final presentation and defence material

FYP-I Deliverable

By the end of FYP-I, HAMQADAM will have a complete **Exam Writer/Scribe Booking and Scheduling System**, including registration, verification, matching, booking, scheduling, and payment records. The emergency replacement feature will remain for FYP-II.

14.2 FYP-II Work Breakdown Structure

1. FYP-I Review and Extension

- Review completed booking system

- Fix remaining issues
- Prepare existing booking workflow for FYP-II features

2. Emergency Writer Replacement System

- Detect writer cancellation or unavailability
- Retrieve original exam requirements
- Exclude cancelled writer
- Search for other eligible writers
- Apply the existing matching rules
- Show replacement options
- Send emergency booking request
- Confirm replacement writer
- Update original booking record

3. Replacement Payment Adjustment

- Compare original and replacement writer fee
- Record additional payment where required
- Maintain credit or refund status
- Update transaction record

4. Individualized Learning Plan Setup

- Define ILP structure
- Create support categories for:
 1. Visual impairment
 2. Hearing impairment
 3. Speech impairment
 4. Autism Spectrum Disorder
- Define learning goals and activities
- Organize learning content according to category

5. ILP Progress Tracking

- Assign learning activities
- Record activity status

- Track progress as:
 1. Not Started
 2. In Progress
 3. Completed
- Allow parents to review progress
- Maintain progress history

6. Therapist and Service Provider Module

- Therapist registration
- Professional profile creation
- Specialization details
- Experience
- Availability
- Consultation fee
- Verification documents
- Admin approval

7. Therapist Categorization

- NGO / Free Service Providers
- Affordable Paid Therapists
- Premium Therapists
- Allow families to compare options according to budget and requirements

8. Therapy Appointment Scheduling

- View therapist availability
- Select available slot
- Send appointment request
- Accept or reject appointment
- Confirm therapy session

9. Online Video Consultation

- Connect confirmed appointment with video session

- Allow parent and therapist to join scheduled call
- Record session status
- Mark completed or missed session

10. System Integration

- Connect emergency replacement with existing booking module
- Connect ILP with child profile
- Connect therapy appointments with therapist profiles
- Ensure dashboards display relevant information correctly

11. Final Testing

- Functional testing
- Integration testing
- User-role testing
- Form and validation testing
- Emergency replacement testing
- ILP progress testing
- Therapy appointment and video-call testing
- Bug fixing and final refinement

12. Final Documentation and Defence

- Complete final report
- Prepare system screenshots and test results
- Finalize presentation
- Prepare complete system demonstration
- Prepare for final FYP defense

FYP-II Deliverable

By the end of FYP-II, HAMQADAM will extend the completed booking system with the **Emergency Writer Replacement System, Individualized Learning Plan with progress tracking, and Online Therapy Consultation module with tiered therapist access and video calling.**
